Rijul Jain

Information Technology Administrator | Networking, Windows Server, Communication
Greater Jaipur Area

Summary

Pursuing a Bachelor of Computer Applications from Shridhar University (expected May 2027) with a focus on Computer Science. Additional certifications include CHNA, Ethical Hacker Expert, and Cloud Computing. A dedicated learner with a strong foundation in system engineering and cybersecurity principles. Currently an IT Administrator at LMDmax Corp, managing IT operations for over 550 employees across various locations. Key responsibilities include IT infrastructure management, system administration, and information security initiatives. Proficient in tools like JumpCloud, Microsoft Azure, and ISO 27001, contributing to operational efficiency and security compliance within the organization.

Experience

LMDmax Corp

Information Technology Administrator

June 2025 - Present (1 year 1 month)

Jaipur

As the sole IT Engineer at LMDMAX, I am responsible for managing and supporting IT operations for more than 550 employees across multiple locations. My role covers end-to-end IT infrastructure management, user support, system administration, asset lifecycle management, and information security initiatives. I successfully led the migration from Zoho Mail to Google Workspace, ensuring a seamless transition with minimal business disruption, and implemented JumpCloud to centralize identity, device, and access management across the organization.

I manage and optimize various enterprise platforms, including Google Workspace, Zoho applications, We360, and UNIRMS, helping improve operational efficiency, workforce management, and productivity tracking. Additionally, I administer Fortinet Firewall infrastructure to enhance network security and maintain secure access controls. My responsibilities also include managing IT assets, vendor coordination, procurement, onboarding and

offboarding processes, troubleshooting hardware, software, and network issues, and providing technical support to employees across the organization.

Beyond daily IT operations, I actively contribute to ISO 27001 compliance initiatives, supporting audits, documentation reviews, asset controls, and information security processes. Working as a single-member IT team has strengthened my expertise in IT operations, system administration, endpoint management, cybersecurity, process automation, and stakeholder management. I am passionate about continuously learning new technologies, improving business processes, and delivering scalable IT solutions that support organizational growth.
